

I have the code below attached to 2 buttons on my databases Main Menu to disable/enable the bypass key. I also have a text box on the Main Menu named txtBypass that displays "True" or "False" depending on if the bypass is enabled or not. I recently converted this database from Access 2010 to Access 2013 and began getting the error "Property not found." Can anyone tell me why?

Thank you for your help.

```
Private Sub cmdDisable_Click()
```

```
On Error Resume Next
```

```
Dim DB As DAO.Database
```

```
Dim PR As DAO.Property
```

```
Set DB = CurrentDb
```

```
Set PR = DB.CreateProperty("AllowBypassKey", dbBoolean, False)
```

```
DB.Properties.Append PR
```

```
DB.Properties("AllowBypassKey") = False
```

```
Set PR = DB.CreateProperty("AllowSpecialKeys", dbBoolean, False)
```

```
DB.Properties.Append PR
```

```
DB.Properties("AllowSpecialKeys") = False
```

```
Set PR = DB.CreateProperty("AllowFullMenus", dbBoolean, False)
```

```
DB.Properties.Append PR
```

```
DB.Properties("AllowFullMenus") = False
```

```
Set PR = DB.CreateProperty("AllowDefaultShortcutMenus", dbBoolean, False)
```

```

DB.Properties.Append PR
DB.Properties("AllowDefaultShortcutMenus") = False
Set DB = Nothing
MsgBox "Bypass Key Disabled"
End Sub

Private Sub cmdEnable_Click()
On Error Resume Next
Dim DB As DAO.Database
Dim PR As DAO.Property
Set DB = CurrentDb
Set PR = DB.CreateProperty("AllowBypassKey", dbBoolean, True)
DB.Properties.Append PR
DB.Properties("AllowBypassKey") = True
Set PR = DB.CreateProperty("AllowSpecialKeys", dbBoolean, True)
DB.Properties.Append PR
DB.Properties("AllowSpecialKeys") = True
Set PR = DB.CreateProperty("AllowFullMenus", dbBoolean, True)
DB.Properties.Append PR
DB.Properties("AllowFullMenus") = True
Set PR = DB.CreateProperty("AllowDefaultShortcutMenus", dbBoolean, True)
DB.Properties.Append PR
DB.Properties("AllowDefaultShortcutMenus") = True
Set DB = Nothing
MsgBox "Bypass Key Enabled"
End Sub

```

**Text Box Code:**

```

Private Sub Form_Load()
txtBypass.Value = CurrentDb.Properties("AllowBypassKey")

```

End Sub
