This is the code I have currently to delete a record.

This is what the form looks like and each entry has a DEL button to delete the record.

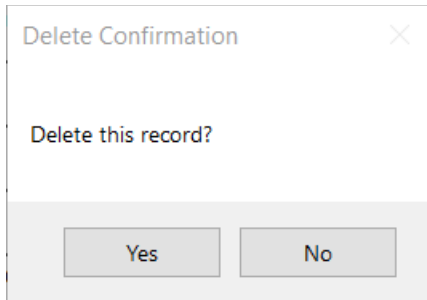

Here is the code behind the DEL button

```
Private Sub BDELETE_Click()

On Error GoTo Err_BDELETE_Click

    Dim Response As String

    Dim Cancel As Integer

        Response = acDataErrContinue

    If MsgBox("Delete this record?", vbYesNo, "Delete Confirmation") = vbYes Then

        If MsgBox(" Are you SURE you want to delte this Record?" & vbCrLf & _

        "This will permanently delete the record.", vbYesNo, "2nd Delete Confirmation") = vbYes Then

        Me.Refresh

        If Me.NewRecord Then Exit Sub

        DoCmd.RunCommand acCmdDeleteRecord

            End If

    End If

Exit_BDELETE_Click:

    Exit Sub

Err_BDELETE_Click:

    MsgBox Error$

    Resume Exit_BDELETE_Click

End Sub
```
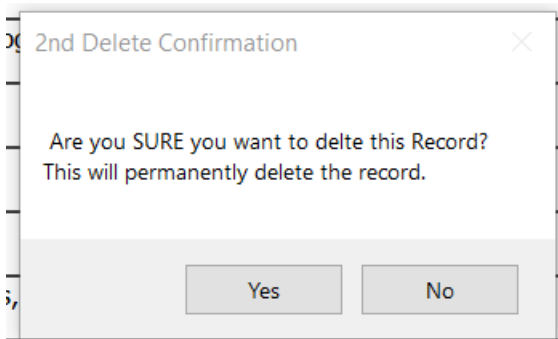

This is what happens when I try to delete a record.

1st Question pops up

Delete Confirmation ✕

Delete this record?

| Yes | No |

I click Yes

2nd Question pops up

2nd Delete Confirmation ✕

Are you SURE you want to delte this Record?
This will permanently delete the record.

| Yes | No |

I click Yes and get this message.

Microsoft Access ✕

The command or action 'DeleteRecord' isn't available now.

OK

Record is not deleted.
