These Hours correlate to the hour of the [Event Start Date] for the reading and are unsorted

There are 75 distinct [Resource Names] and associated [Resource ID's]

There are about 7 distinct different start dates

Each group has between 1 and 8 readings (rows). Rows are sorted descending by "Curtailed kW" I only need the first 4 rows (starting from the top) for each group which I intend to feed into another query that will give me the average of the top 4 rows of each group.
